Hi <First Name>

Right now, there are three "bad actors" that are targeting you, your assets, and ultimately your freedom.

Those are: 1. Hackers 2. Scammers and 3. Overreaching Governments (think Digital ID and CBDC).

So let me ask you, do you think you could defend yourself if a nation-state tried to hack your bank accounts?

That sounds like a crazy question, right?

Well, most people underestimate modern hackers and scammers.

First off, they are not just one-off, amateur tech geeks typing away on their computers in their underwear. They are organized crime syndicates and military hacking groups.

They target average, everyday people... not Fortune 500 companies. And they are SUPER successful at this.

Once you throw AI in the mix, you get the perfect "cocktail" for theft.

So much so that 1 out of 3 Americans will fall victim to a hack or scam this year.

That's a crazy statistic, but it becomes much more real when you visualize it. That means if you stand next to two of your close friends... statistically one of you will get hacked or scammed this year.

It might be something small like losing a few hundred dollars, or it could be a complete rinse (*meaning, you lose everything*). This happens more than you think, and no, the FBI won't bail you out.

The problem is, no one thinks that this sort of thing will ever happen to them... they think they are too smart, too lucky, or that taking the few necessary steps is not worth their time, UNTIL it actually happens to them.

That's when regret sets in.

If you feel that you are too busy, too smart, or too lucky... I highly encourage you to reconsider.

Especially since almost all assets are digital now (meaning theft is easier than ever).

And I've only been talking about hackers, scammers, and thieves so far... asset seizure is becoming a real problem in terms of government overreach as well.

Countries all over the world are rushing to implement Digital IDs and Central Bank Digital Currencies in order to create the most powerful systems of surveillance and control ever seen.

That's why I asked my friend Glenn Meder, a world-renowned privacy and security expert, to hold a special webinar for us on this topic this **Thursday, (THE DATE)** at 7pm CT (8pm ET / 6pm MT / 5pm PT).

The class is titled, "*TOP 5 STEPS TO EXIT THE SURVEILLANCE STATE & PROTECT YOURSELF ONLINE*"

Glenn is the founder of Privacy Academy, and he specializes in talking to normal, non-techy people.

In this class you will learn about how:

- Top-level crime syndicates and military hacking groups are targeting normal, everyday individuals to fund their lavish lifestyles.
- 1 out of 3 Americans fall victim to a hack or scam each year. Each victim has one thing in common... they never thought this could happen to them.
- Cybercrime is accelerating at break-neck speeds due to AI's advances. Deepfake scams have already taken down huge businesses and very wealthy individuals.
- Governments are marching full speed towards complete digital control and surveillance. Overreaching governments have already illegally seized their citizens' assets. (yes, in Canada, Europe, and America too).
- CBDCs and the G.E.N.I.U.S. Act are Trojan Horses for Programmable Money.
- To protect yourself and the lifestyle you have worked so hard to build.
- And much more...

At the end of the class, Glenn will open the floor up for Questions and Answers.

This is extremely important information and not something to outsource to an assistant. This is knowledge that you personally need to have in order to protect yourself and your assets.

**SWIPE TWO** Send Day Of (Optional)

**Subject:** %FIRSTNAME%, only a few hours left to claim your seat

Do you know what governments, hackers, scammers, and thieves all have in common?

They all want your data... which sounds pretty harmless, right? Who cares if the government or hackers know that you like Ben and Jerry's and watching Netflix after midnight?

Well, that's not why they care. They want your data because then they can control you and your money.

For example, once a hacker or scammer gets your data... they will do everything they can to take all of your money from you.

This happens much more than people think, so much so that 1 out of 3 Americans gets hacked or scammed each year.

Sometimes victims lose a few hundred dollars, but sometimes they lose everything.

Unfortunately, a lot of people make the mistake of not taking security seriously UNTIL they get hacked or scammed (which is too late.)

But what about governments? It's not like they are going to take your money away from you, right?

Well, at least not as blatantly as a hacker would. Governments all over the world are creating Digital IDs and Central Bank Digital Currencies (or, in the US, the GENIUS act.)

Their goal is to digitize all of your assets, constantly surveil them, and set up a control system unlike any the world has ever seen before.

You need to know how to cut off your supply of data if you want to protect your assets and the lifestyle that you worked so hard to build.

That's why I asked my friend Glenn Meder, a world-renowned privacy and security expert, to hold a special webinar for us on this topic tonight at 7pm CT (8pm ET / 6pm MT / 5pm PT).

[>>> Click here to join the privacy and security webinar now <<<](#)

Glenn will also cover the dangers of government overreach in terms of privacy and asset seizure.

I think this will really open your eyes.

Glenn is an expert on teaching everyday, NON-TECHY people how to get private and secure online.

So, don't worry if you're not a tech geek.

In just a few steps, you can secure all of your "low-hanging" fruit security risks.

**SWIPE THREE** Send Day After

**Subject:** The class replay is up! (It was great)

Hi <First Name>

Did you see last night's class?

It was great!

If you haven't seen it yet, you can [watch a replay here.](#)

Glenn covered a lot of topics, like how:

- Top-level crime syndicates and military hacking groups are targeting normal, everyday individuals to fund their lavish lifestyles.
- Governments all around the world are passing Digital IDs and CBDCs which will be used to create the most advanced system of surveillance and control ever.
- 1 out of 3 Americans falls victim to a hack or scam each year. Each victim has one thing in common... they never thought this could happen to them.
- Big Tech is working together with Big Brother to surveil you and make detailed profiles on you.
- Censorship is happening at an alarming rate.
- Cybercrime is accelerating at breakneck speeds due to AI's advances. Deepfake scams have already taken down huge businesses and very wealthy individuals.
- Taking back your privacy is not only possible, but it can be easy!
- Learn how you can use these skills to protect your data, assets, and freedom itself from hackers, scammers, thieves, big tech, and overreaching governments.
- And much more...

Getting private and secure is not hard, and it does not take a ridiculous amount of time.

More than that, it is extremely important. I see a ton of people spending all of their time finding ways to grow their wealth. Well, if you do not take your security seriously, you can get rinsed and lose everything you have overnight.

Unfortunately this happens more often than you'd imagine. If you are spending all your time focusing on growth without securing what you have, you are building a house of cards.

And most people don't realize how wide-open and vulnerable they actually are.

Think of it this way: you have worked hard to create your dream lifestyle; now you need to make sure to protect it. Especially since there are bad actors that spend all of THEIR time trying to take money from normal, everyday people like me and YOU!

Last night's class is a great starting point for that. But you can't expect to learn everything in an hour long class.

The good news is, you don't have to live with a "house of cards." Glenn knows exactly how to break these topics down into easy-to-consume, bite-sized pieces.

Glenn is the founder of Privacy Academy, an online program designed to help average, non-techy people protect their assets and escape surveillance. He created an entire program on this very subject titled "BulletProof Finances."

And as a thank you for attending the class, Glenn is [holding a huge discount on his course.](#)

On top of that, he is also adding in a 2-month free trial to his Privacy Academy membership, where you get access to weekly live trainings (with replays), monthly Q&A's, and an active chat room moderated by his team of privacy experts.

The special offer and replay come down this Sunday night at midnight, so if you are interested please take advantage of it.

Act today, save money and take back your privacy while you still can.

**SWIPE FOUR** – Send the last day of the event (Sunday).

**Subject:** Last chance to make your assets bulletproof...

Hi <First Name>,

Earlier this week Glenn Meder held a special webinar all about how you can protect your assets and lifestyle you have worked so hard to build.

[You can watch the replay here!](#)

In the class, Glenn discussed the three vectors attacking your lifestyle - hackers/scammers, Big Tech, and Big Brother. I was shocked to learn how advanced these threats are becoming, especially when Glenn started talking about CBDCs and Digital IDs.

After the class, Glenn showed a powerful breakdown of all the ways you can secure your "low-hanging" privacy and security risks.

And as a thank you to everyone who attended the class, Glenn also gave a great discount to his course BulletProof Finances.

His program is designed for average, non-techy people who want to protect their assets and exit the surveillance state.

He has taught hundreds of thousands of people these skills and has a great team of privacy/security experts with him!

It's by far the best way to get private and secure online and sleep peacefully at night, knowing that you are safe.

You can [check out the special offer for his course here.](#)

And on top of adding a huge discount to the course, he is also adding in a 2-month free trial to his Privacy Academy membership, where you get access to weekly live trainings (with replays), monthly Q&A's, and an active chat room moderated by his team of privacy experts for anyone who signs up today.

The class, and special offer come down tonight at Midnight.

Thank you!
