Subject: You're invited (Exclusive livestream)

Hi <FirstName>

Recently, I read an article about the new AI software that is in every Windows and Apple computer, and something shocked me...

Sure, the new, high-tech features are super convenient, but no one is talking about how this technology could be used against you.

This caused me to reach out to my friend Glenn Meder (a world-renowned online privacy expert), and he confirmed my concerns...

Your computer is not private.

In fact, these companies are **ACTIVELY** using their operating systems to spy on you!

Anything you do on your Windows/Apple computer is automatically "compromised" by their system.

And AI is making this even worse.

Windows recently announced that they are releasing a new AI "tool" called Copilot+ that will be in all of their operating systems.

One of the core features of "Copilot" is the recall feature, in which it will take a screenshot of your computer screen every second, and then AI will analyze it.

In other words, your computer will watch every single thing you do, and it will **UNDERSTAND** everything that you do.

It will have a perfect memory, which will allow it to pull up anything that you read, type, or do in a microsecond.

So, that brings on the question...

What liberty will you actually have if you are being watched and analyzed every second of the day?

Of course, Windows says this is only to help them "personalize" your content, but I'm sure you know the real reason why they are doing this...

They want to collect as much data on you as possible! They want to manipulate you, censor information, and know where you stand politically.

And you might be wondering, is Apple any better? I mean, they do use "privacy" as one of their selling points.

Well, they're just as bad as Windows.

Big Tech has teamed up with Big Brother to create a digital surveillance empire. And Windows/Apple are key components to it.

Now is absolutely the time to get private.

That's why I asked my friend, Glenn Meder, an online privacy expert and freedom fighter, to hold a class on this specific topic.

The class is titled: *"Your Computer is Spying On You... Here's How You Can Stop It."*

You can [sign up for it here.](#)

The class is going live this Thursday, at 7pm CT (8pm ET / 6pm MT / 5pm PT).

I recommend that you sign up for the class, because there are limited seats and this is one of our largest requested classes.

I'm excited to hold this class for you, I think it will be VERY eye-opening to what's going on behind the scenes.

Feel free to invite your friends, in fact, I think this is a very important message to spread.

I hope to see you there!

Subject: %FIRSTNAME%, only a few hours left to get your FREE ticket (limited seats)

Hi <First Name>

Last year, England arrested and jailed civilians for what they tweeted!

Not just for one night either; some people got sentenced to multiple years in prison for nothing more than simply TWEETING!

Big Tech is teaming up with Big Brother to spy, censor, and spread propaganda.

This UK-based tyranny is a glimpse into what can happen in a world of no privacy.

So that brings on the next question... what comes next after being arrested for your tweets? Being arrested for what you type on your computer? Or maybe getting arrested for the articles that you read?

It seems like George Orwell was right, and "Thought Police" are no longer a thing of fiction.

We cannot let this happen. That's why I asked my friend Glenn Meder to hold a special class specifically on this issue.

It's called: *"Your Computer is Spying On You... Here's How You Can Stop It."*

It's time for you to take back your privacy...

And it's A LOT easier than you imagine.

Glenn is the leading expert in teaching everyday, NON-TECHY people how to get private and secure online. So, don't worry if you're not a tech geek.

Glenn also cares about privacy for the same reason that I do, which is protecting our individual freedom.

You're not going to be left scratching your head – because Glenn will carefully and slowly walk through the basic steps you need to take to make your data off-limits to the paranoid psychopaths who want to use it against you.

Privacy is fast becoming THE issue of our time.

What kind of world will your children inhabit if you don't do your part to defend our freedom?

The good news is, in just a few steps, you can opt out of being spied on and reclaim your God-given right to privacy.

Subject: The webinar replay is up! (It was great)

Hi <First Name>,

Did you see last night's webinar?

It was great!

If you haven't seen it yet, [you can watch the replay here.](#)

72% of Americans said they are "very concerned" to "extremely concerned" about their online privacy.

I consider myself to be part of that 72%.

Because without privacy, you can have no freedom.

With modern computers, big tech companies and government agencies can gather information like:

- Your location (at all times).
- Your interests (especially politically).
- Who you are friends with.
- Where you store your finances.
- Not to mention live access to the cameras and microphones on your devices.

It's a huge violation of our 4th Amendment rights, and it opens the door for things like CBDCs, Digital IDs, and even Social Credit Systems.

So, what can we do about it? More regulations?

No. We must protect our individual rights and make the change ourselves. We cannot outsource our freedom.

And here's the truth...Big Tech computers and software are designed specifically to spy on you.

But escaping the Big Tech monopoly doesn't have to be hard.

In fact, Glenn's goal is to make transitioning away from Big Tech as easy as possible for you.

Glenn even created an entire course on it.

And if you decide to sign up for the course, he will send you a free USB stick with the private and easy-to-use operating system on it. It is already pre-loaded with our top recommended privacy tools.

You can [sign up for that course here.](#)

That way you can load this private operating system onto your own computer.

It's a fantastic offer!

And on top of adding a huge discount to the course, he is also adding in a 2-month free trial to his Privacy Academy membership, where you get access to weekly live trainings (with replays), monthly Q&A's, and an active chat room moderated by his team of privacy experts for anyone who signs up today.

Big tech companies will never respect your privacy. They are a glorified "wing" of Big Brother surveillance.

You need to take back your privacy today.

SWIPE FOUR – Send the last day of the event (Sunday). (March 30th)

Subject: Last chance to take back your privacy...

Hi <First Name>,

Earlier this week Glenn Meder held a special webinar titled “*Your Computer is Spying On You... Here's How You Can Stop It.*”

[You can watch the replay here!](#)

Glenn showed big tech companies like Windows and Apple are using AI to gather as much information on you as possible.

This information is not just for tailored ads... it's to create a detailed profile on you, your beliefs, interests, and hot buttons.

Glenn also showed a powerful breakdown of all the ways you can put a stop to Big Tech, governments, and thieves spying and recording everything you do online without your knowledge or consent.

It's Glenn's goal to help people exit the surveillance state and protect our individual freedoms.

That's why he created a comprehensive course all about easily switching to Linux.

And if you decide to sign up for the course, he will send you a free USB stick with the private and easy-to-use operating system on it. Pre-loaded with our recommended privacy tools.

You can [sign up for that course here.](#)

And on top of adding a huge discount to the course, he is also adding in a 2-month free trial to his Privacy Academy membership, where you get access to weekly live trainings (with replays), monthly Q&A's, and an active chat room moderated by his team of privacy experts for anyone who signs up today.

I really recommend that you sign up!

The special comes down tonight at midnight.

Thank you!
